DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-3,5 and 8-13 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3, 12-14 and 16-18 of U.S. Patent No. 6,362,280. Although the conflicting claims are not identical, they are not patentably distinct from each other because the differences between the instant claims and the claims of the references are the emulsion light transmittance of the instant claims is included in that of the reference (at least 20% is included in at least 10%) and the instant claims do not disclose the reaction rate of said maleic anhydride adding to said starting material, whereas the claims of the reference do.

However, they do disclose the same or similar product, an emulsifiable polyolefin wax, under the same conditions to form the same or similar product. Therefore, it would have been obvious to one of ordinary skill in the art to select the reactants under conditions to form the same or similar products since they have been shown to be

Application/Control Number: 10/067,513
Art Unit: 1711

effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selections.

Claims 6-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
